Hackathon

AI helped you train your machine learning model, but can you vouch for it?

Probabl , Data for London

Location: London City Hall

Time: 09:30 – 13:00

Hackathon Challenge

AI can write a complete machine learning pipeline in seconds. But can you vouch for it?

In this half-day hackathon, co-hosted by [Probabl](#) and the [GLA Data for London Team](#) as part of [London Data Week 2026](#), participants will tackle real policy problems faced by the Greater London Authority, including youth employment, building decarbonisation, and open data discovery. The focus isn't just on training a model, but on being able to evaluate, explain, and vouch for it – a skill that's only becoming more important as AIs can generate ML pipelines in seconds.

Participants will be encouraged to use the Python library [skore](#) in their evaluations. The winning teams will get to pitch their solution to the GLA's data leadership team in the afternoon.

Note: Participants are asked to bring their own laptop.
